POWER BI PROJECTS

Power BI Projects: Developed multiple interactive Power BI dashboards involving data cleaning, data modeling, relationships, DAX calculations, KPI cards, and business analysis. Analyzed sales, profit, customers, products, regions, categories, and managers using various charts and time-intelligence calculations such as YTD, QTD, MTD, WTD, and moving averages. Created dashboards to identify top customers/products, sales performance, profitability, regional trends, and category insights.

ADDITIONAL PROJECT

Pizza Sales Analysis — SQL, Python (Matplotlib, Seaborn), Excel

- Cleaned and analyzed 48,620 transaction records from 2015 using SQL and Python to identify revenue drivers.
- Built an Excel dashboard with PivotTables and charts to visualize sales by category, size, and hour, revealing peak hours of 12–1 PM and 6–8 PM.
- Recommended category focus for Classic and Supreme pizzas, which drove 60% of total revenue.
